

Inflammatone™

Natural support for a healthy inflammatory response

By David M. Brady, ND, DC, CCN, DACBN & Suzanne Copp, MS

THIS INFORMATION IS PROVIDED FOR THE USE OF PHYSICIANS AND OTHER LICENSED HEALTH CARE PRACTITIONERS ONLY. THIS INFORMATION IS INTENDED FOR PHYSICIANS AND OTHER LICENSED HEALTH CARE PROVIDERS TO USE AS A BASIS FOR DETERMINING WHETHER OR NOT TO RECOMMEND THESE PRODUCTS TO THEIR PATIENTS. THIS MEDICAL AND SCIENTIFIC INFORMATION IS NOT FOR USE BY CONSUMERS. THE DIETARY SUPPLEMENT PRODUCTS OFFERED BY DESIGNS FOR HEALTH ARE NOT INTENDED FOR USE BY CONSUMERS AS A MEANS TO CURE, TREAT, PREVENT, DIAGNOSE, OR MITIGATE ANY DISEASE OR OTHER MEDICAL CONDITION.

Inflammatone™ is a powerful formula which combines the best of science and enzyme technology for degrading fibrinolytic protein compounds produced during inflammation. Research shows that inflammation is associated with many serious disorders. By controlling the inflammatory processes in multiple metabolic pathways, Inflammatone™ can be helpful in many situations, including osteo and rheumatoid arthritis, atherosclerosis, sports injuries, and post-operative healing.

Inflammatone™ ingredients target many metabolic pathways of the inflammatory response^{1,2}

1. Significant inhibition of the COX-2 (cyclooxygenase) enzyme, which produces prostaglandins PG-E2 (inflammatory) and thromboxanes TX-A2 (vasoconstrictive and increases platelet aggregation). The COX-2 inhibition is achieved by turmeric, ginger, quercetin and resveratrol. The PG-E2 is also known to increase cell proliferation, which may be beneficial for normal tissue growth and wound healing but not for cancer promotion. That is why inflammation is associated with the risk of cancer development in many studies and underscores the importance of keeping inflammation under control.

2. Additional inhibition of the expression of the COX-2 enzyme by antioxidant effects on NF-Kappa B, which is one of the regulators of the cytokine (inflammatory) response. This is achieved by the antioxidant action of turmeric, quercetin, rutin, rosemary and resveratrol. This is a preferred mechanism of inhibition because it acts upstream in the metabolic pathway by reducing oxidative stress, which can be one of the causes of inflammation. Thus, this is a preventive action as opposed to blocking inflammation after it has started.

3. Inflammatone™ ingredients have a minimal inhibition of the COX-1 enzyme which has a maintenance function for a number of tissues in the body, including intestinal cells. This is unlike aspirin or NSAIDs which are very irritating to the GI tract.

4. Inflammatone™ has a mild anti-thrombotic (blood thinning) effect which could result in increased cardiovascular risk protection, similar to that of aspirin yet without aspirin's severe GI irritation. This blood thinning effect of Inflammatone™ is due to the following:

- mild COX-1 inhibition by ginger
- mild anti-coagulating activity of turmeric and quercetin
- fibrinolytic effect of the proteolytic enzymes, especially the serratiopeptidase

Cancer metastasis is known to be mediated by increased platelet aggregation, so any agent that decreases it may reduce the risk of cancer proliferation.⁷

5. Inflammatone™ may be superior to selective COX-2 inhibitors like Vioxx and Celebrex due to the fact that, by design, they are lacking any COX-1 inhibiting activity, which affects platelet aggregation. That is why drugs like Vioxx and Celebrex were shown in studies to increase the risk of thrombosis and overall CVD risk. This is especially important for patients with low omega-3 fatty acid stores.

6. Inflammatone™ may be superior to selective COX-2 inhibiting drugs due to the fact that in addition to inhibiting COX-2, some Inflammatone™ ingredients also inhibit the LOX (lipoxygenase) enzyme. This enzyme is normally producing leukotrienes (LT-4 series) which cause bronchoconstriction and vasoconstriction. The LOX inhibition is achieved through the action of boswellia, turmeric, ginger and quercetin.

Available in 60, 120, & 240 capsules

Supplement Facts

Amount Per Serving	% Daily Value
InflammENZ™ Proprietary Blend Proteases, Serratiopeptidase, Trypsin, Chymotrypsin	222 mg *
Curcumin C3 Complex® (<i>Curcuma longa</i>)(rhizomes)(containing three curcuminoids: curcumin, bisdemethoxycurcumin, demethoxycurcumin) [standardized to contain 95% curcuminoids]	200 mg *
Boswellia (as Boswellin® Extract) (<i>Boswellia serrata</i>)(resin) [standardized to contain 60% boswellic acids]	200 mg *
Ginger Extract (<i>Zingiber officinale</i>)(root) [standardized to contain 5% gingerol]	200 mg *
Quercetin	75 mg *
Rutin	75 mg *
Rosemary Extract (<i>Rosmarinus officinalis</i>) (leaf)[standardized to contain 7% carnosic acid]	50 mg *
Trans Resveratrol from 10 mg <i>Polygonum cuspidatum</i> (root)	5 mg *

*Daily Value not established.

Other Ingredients: Cellulose (capsule), microcrystalline cellulose, vegetable stearate, silicon dioxide.

Curcumin C3 Complex® and Boswellin® are registered trademarks of Sabinsa Corporation.

7. Inflammation™ may be superior to the typical anti-asthma drugs that are only leukotriene receptor blockers. This is because Inflammation™ reduces the formation of leukotrienes (LT) in the first place as opposed to just blocking certain LT receptors, as the drugs do.

8. One additional advantage that Inflammation™ has over selective anti-inflammatory drugs is that it combines many benefits in one, blocking various pathways at the same time. When any one drug is given, it only blocks one arachidonic acid (AA) pathway. For example, Vioxx and Celebrex block only COX-2, which causes an overflow of AA into the other pathway, the LOX-1. That is why COX-2 inhibiting drugs are known to have side effects such as increased incidence of asthma.

9. Some of Inflammation's ingredients were shown to block phospholipase A2 (turmeric, ginger) or TNF-alpha (quercetin), which is similar to what corticosteroids do, but without their side effects.

Benefits:

- The flavonoid rutin reduces glycation (in addition to its anti-inflammatory and antioxidant properties).
- Serratiopeptidase improves the efficacy of antibiotic treatment and relieves sinus congestion via mucolytic effects.
- See our Grape Seed Supreme technical sheet for an extensive description of the many benefits of resveratrol such as that on collagen, cardiovascular disease and others conditions.

Inflammation™ Competitive Advantages:

- Synergistic formula
- Inhibits inflammatory processes in multiple metabolic pathways
- Good safety record and extensive research on all ingredients

Designs for Health chose not to include the following ingredients for these reasons:

- Hops was shown to cause urticaria and other allergic effects
- Oleanolic acid was shown to increase insulin production similar to glucose
- Cayenne pepper was shown to cause GI irritation and leaky gut

How to Take:

- As a dietary supplement, take two capsules per day between meals, or as directed by a health care practitioner.
- Not recommended for use by pregnant or lactating women.
