### Why the triglyceride (TG) form of fish oils?

- Naturally occurring form in foods and in the body
- Research indicates that it is up to 100% more bioavailable than the ethyl ester (EE) form
- Easier to assimilate for individuals with impaired digestion and absorption
- Less prone to oxidation and production of free radicals
- No post digestion production of alcohol in the gut or blood stream as in the EE form
- Less susceptible to increasing free fatty acids in the blood, which may increase blood glucose
